PROFESSIONAL PROFILE

Solution & Automation Engineer with hands-on experience in **Python**, **SQL**, and applied **AI-driven** workflow systems. Designed and deployed **computer vision** and **automation solutions** that reduced manual processes from weeks to days across warehouse and commercial analytics environments. Experienced in translating business requirements into structured technical implementations, collaborating closely with data scientists and stakeholders. Strong foundation in software engineering, database systems, and enterprise technologies, with long-term ambition to grow into solution architecture roles focused on scalable and reliable system design.

Skills

Programming & Data Engineering

Python • SQL • Pandas • R • JavaScript (Node.js) • ETL

AI & Automation Systems

YOLO • Tesseract OCR • EasyOCR • Batch Processing • Data Cleaning • Workflow Automation

Systems & Enterprise Technologies

Next.js • SAP DataSphere • SAP ABAP • Power BI • Database Systems • Azure ML Studio • API Integration

Architecture & Collaboration

Modular System Design • Requirements Analysis • KPI Design • Agile Project Work • Cross-Functional Communication

Professional Experience

Student Assistant – Commercial Analytics

07/2025 – 01/2026

Salling Group

- Designed and deployed a computer vision + OCR automation pipeline (Python, YOLO, Tesseract) processing 3,000+ labels per batch, reducing extraction time from ~2 weeks to 3–4 days.
- Structured a modular batch workflow (detection → OCR → preprocessing → structured output) enabling scalability and iterative improvement.
- Developed Python-based automation tools and implemented automated job pipelines in Azure ML Studio to support structured model execution and validation.
- Contributed to KPI dashboard development in Power BI and collaborated with data scientists and stakeholders to align solutions with business requirements.

Intern – Trade Planning & Pricing

02/2025 – 06/2025

Salling Group

- Contributed to migration of legacy reporting scripts to a new enterprise system, ensuring data integrity and logic consistency.
- Automated reporting processes using SAP DataSphere, SQL, and R, reducing manual effort and improving analytical reliability.
- Supported testing and validation of migrated workflows under the new system structure.

Production Assistant & Internal Systems Development

03/2022 – 02/2025

Salling Group Warehouse

- Led operational shifts of 10+ team members in a high-volume warehouse environment.
- Designed and deployed three internal full-stack applications (Next.js + Node.js) replacing paper-based workflows and reducing ~100 printed pages per week.
- Identified process inefficiencies and implemented structured technical improvements.
- Applications remain in active use for over one year.

Education

Bachelor of Global Business Engineering | Software Technology Specialization

| VIA University College | Aug 2021 - Jan 2026

- Relevant Coursework:
Software Engineering • Database Systems • Data Analytics Infrastructure • SAP ABAP Programming • Web Development • Systems Digitalization (Industry 4.0) • Product & Project Management • Innovation & Entrepreneurship
- Bachelor Project: **Smart Gallery System – Automated Presentation Device**

PERSONAL STORY & PROFESSIONAL DIRECTION

After relocating to Denmark to pursue Global Business Engineering, I progressed within the same organization from warehouse operations to analytics and automation roles. In the warehouse, I led operational shifts of 10+ team members and initiated internal digital solutions that reduced manual processes. This transition from hands-on execution to data-driven system design provided insight into business processes from both operational and strategic perspectives. I am motivated by building structured technical solutions that create measurable impact and aim to develop toward solution architecture roles where scalable system design supports long-term business performance.
