PROFESSIONAL PROFILE

Analytics & Automation Engineer with hands-on production experience in **Python**, **SQL**, and applied **AI-driven workflow systems**. Designed and deployed computer vision and automation solutions that reduced manual processes from weeks to days — across both warehouse operations and commercial analytics environments. Experienced in translating business requirements into structured technical implementations, working closely with data scientists and stakeholders to deliver solutions that create measurable impact. Strong foundation in **software engineering**, **data infrastructure**, and **enterprise technologies**, with a consistent track record of taking projects from concept to production. Driven by the intersection of technical depth and business understanding — building systems that solve real problems reliably and at scale.

Skills

Programming & Data Engineering

Python • SQL • Pandas • NumPy • R • JavaScript • TypeScript • Node.js • ETL • Java

AI & Automation Systems

YOLO • Tesseract OCR • EasyOCR • Computer Vision • TensorFlow • Batch Processing • Workflow Automation • Data Cleaning

Web & Application Development

Next.js • React • .NET / C# • Arduino • REST APIs • API Integration

Systems & Enterprise Technologies

SAP DataSphere • SAP ABAP • Power BI • Azure ML Studio • Databricks • Tableau • Database Systems

Design & Collaboration

Figma • Git • GitHub • Docker • Agile Project Work • KPI Design • Modular System Design • Cross-Functional Communication

Languages

English: Fluent • Bulgarian: Native • German: Basic

Professional Experience

Student Assistant – Commercial Analytics

07/2025 – 01/2026

Salling Group

- Designed and deployed a computer vision + OCR automation pipeline (Python, YOLO, Tesseract) processing 3,000+ labels per batch, reducing extraction time from ~2 weeks to 3–4 days.
- Structured a modular batch workflow (detection → OCR → preprocessing → structured output) enabling scalability and iterative improvement.

- Developed Python-based automation tools and implemented automated job pipelines in Azure ML Studio to support structured model execution and validation.
- Contributed to KPI dashboard development in Power BI and collaborated with data scientists and stakeholders to align solutions with business requirements.

Intern – Trade Planning & Pricing

02/2025 – 06/2025

Salling Group

- Contributed to migration of legacy reporting scripts to a new enterprise system, ensuring data integrity and logic consistency.
- Automated reporting processes using SAP DataSphere, SQL, and R, reducing manual effort and improving analytical reliability.
- Supported testing and validation of migrated workflows under the new system structure.

Production Assistant & Internal Systems Development

03/2022 – 02/2025

Salling Group

- Led operational shifts of 10+ team members in a high-volume warehouse environment.
- Designed and deployed three internal full-stack applications (Next.js + Node.js), replacing paper-based workflows and eliminating over 100 manually printed pages per week
- Identified process inefficiencies and implemented structured technical improvements.

Education

Bachelor of Global Business Engineering | *Software Technology Specialization*

| VIA University College | Aug 2021 - Jan 2026 | Graduated

- **Software & Systems** — Software Engineering, .NET Development, Web Development, SAP ABAP Programming, Database Systems
- **Data & Analytics** — Data Analytics Infrastructure, Business Intelligence Analytics, Data Analysis
- **Business & Management** — Product Management, Project Management, Management & Strategy, Innovation & Entrepreneurship
- **Global & Communication** — Global Business Communication, Intercultural Business Communication, Digital Marketing
- Bachelor Project: **Smart Gallery System – Automated Presentation Device**

PERSONAL STORY & PROFESSIONAL DIRECTION

After relocating to Denmark to pursue Global Business Engineering, I built my career progressively within the same organisation — starting as a warehouse worker, gradually taking on operational leadership, and eventually moving into analytics and automation roles. That journey was driven by curiosity and a consistent need to solve the problems I saw around me, and it gave me a grounded understanding of how businesses work from the inside out. That foundation shapes how I approach engineering today — I understand why a solution needs to exist before I build it, what it needs to do for the people depending on it, and how it needs to hold up over time. I am driven by technical work that creates measurable impact and aim toward roles where strong system design and real business outcomes go hand in hand.
